Research Experiences for Undergraduate Faculty
AIM Workshop
June 4 to 8, 2012

Organized by Leslie Hogben, Roselyn Williams, and Ulrica Wilson

The American Institute of Mathematics has sponsored one-week REUF workshops in 2008, 2009, and 2011, and will sponsor another REUF workshop in 2012. These workshops bring together leading research mathematicians with faculty at undergraduate institutions who are interested in involving their students in areas of active research. Lectures at the workshop will provide background information and introduce open problems. The majority of the workshop will be spent working on problems, reporting on progress, and formulating plans for future work. In addition to the workshop itself, there will be opportunities for continuing activities.

The goals of the workshops are to promote undergraduate research in undergraduate institutions, and to forge lasting research collaborations among the faculty at doctoral universities and undergraduate institutions.

Preference will be given to faculty who teach and advise substantial numbers of minority students.

For further information on the 2012 workshop or to apply, visit the AIM upcoming workshop website at http://www.aimath.org/research/upcoming.html or contact Leslie Hogben at hogben@aimath.org.
